**Text of the abstract**

**(Continuation of Item 5 of the first sheet)**

An aspherical microlens arrays (100) comprise a base (120), and a plurality of aspherical microlenses (110) arranged on the base (120) and having different curvature radiiuses and conic coefficients, respectively, along two orthogonal axes on the base (120) perpendicular to an optical axis, by which a degree of refraction, namely, a numerical aperture can be easily adjusted depending on each axial direction, a spherical aberration can be reduced, and concentration efficiency can be improved. In addition, in case of applying the aspherical microlens arrays (100) to a projection screen, an image sensor, or the like, it is advantageous to improve sensitivity and resolution thereof.
